DETAILED ACTION

Allowable Subject Matter

Claims 1-19 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 5, 9, 13, 14, 15, 17-19, the prior art of record, specifically Bark, discloses a system wherein multiple nodes are involved in measuring parameters and in generating responses to measured parameters. Specifically, remotely-located mobile station performs monitoring of radio-related parameters (see: Col. 3, lines 45-60), determines if the monitored values exceed predefined thresholds and then sends a measurement report to a controller (Col. 8, lines 12-15). The controller then determines if action should be taken as a result of the reported measurements/events. The controller may then signal to the reporting mobile station and/or to other remote mobile stations to alter their actions as a result of the measurements/events (see: Col. 8, lines 50-55). However, neither Bark alone or in combination with other cited prior art, disclose a node to monitor for changes in a communication session in which that node is participating. More specifically, the changes in the communication session which are detected are the result of a new node or group of nodes entering into the communication session causing interference with or a deterioration of the signal strength in, the signals of the existing session. Once changes have been detected and evaluated, the node then generates a signal to alter its own behavior as a result. In other words, more than one node in a system may be equipped with the claimed apparatus; however, each node that has the apparatus stands alone in the monitoring and its responses to the monitoring.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US Patent # 6,600,933 discloses a transmission diversity method in a radio FDD communication where the reception quality is measured at a communication terminal.
